Cost of living crisis: Why you should review your budget and plans

The cost of living is rising. Reviewing your finances now is crucial for understanding what effect inflation could have on your lifestyle and long-term plans.

Inflation was at an almost 40-year high. In the 12 months to August 2022, it was 9.9%. There are several factors contributing to rising inflation, including the conflict in Ukraine, which has disrupted energy and food supplies.

Rising inflation means now is the ideal time to review your budget

Keeping track of your finances during the cost of living crisis is crucial. In the short term, you should review your budget. Can your budget absorb the higher costs, or do you need to make lifestyle changes?

The Bank of England expects inflation to peak at around 13%. It's also said it doesn't expect the rate to fall to its target of 2% for several years.

So, you should look at what that means for you in the coming years. Will rising energy prices mean you need to be more mindful of energy use or cut back expenses in other areas?

While the headline inflation figure can give you an idea of how prices are changing, your personal inflation rate may be very different. If you commute long distances, for instance, the steep rise in fuel costs may mean your outgoings rise more than you expect.

Going through your budget and calculating how your regular costs have changed in the last year can help you better manage your finances.

In some cases, you may decide to draw on savings or other assets to bridge a gap if your expenses rise. You should ensure this is sustainable.

The steps you take could affect your long-term plans

While it's important to focus on how the cost of living crisis is affecting your finances now, don't forget to consider the long-term effects too. Decisions you make now could affect your income and financial security for years to come.

If you're using assets to create an income, such as your pension, you need to be aware of how increased withdrawals may affect you. Could taking a higher income from your pension now to cover costs mean that you deplete your savings faster than you expect? If so, it could mean you face an income shortfall later in life.

Research also suggests that some people are cutting back outgoings that could improve long-term financial security. According to Canada Life, 5% of adults have already stopped contributing to their workplace pension due to budget pressures. A further 6% are actively thinking about pausing their pension contributions.

While pausing contributions for a few months may seem like it will have little effect on your retirement, it can be larger than you think. The power of compounding means that pausing pension contributions for just a year could reduce the value of your pension at retirement by 4%.

It's not just stopping pension contributions that could affect your long-term plans. Things like reducing how much you add to your savings account or investment portfolio could affect whether you can reach your goals in the future, whether that's to support children through university or retire early.

Contact us to review your finances

Amid the current economic uncertainty, reviewing your financial plan can give you peace of mind and confidence. We'll help you understand how your current budget has been affected and the steps you can take now to create long-term financial security.

Please contact us to arrange a meeting to discuss your goals and the effect the cost of living crisis could have.

The benefits of starting a pension early

It's never too early to start saving for retirement. In fact, the sooner you start saving, the more time for your money to grow.

Starting a pension early is one of the best things you can do for your financial future. By taking advantage of the benefits of early retirement savings, you can ensure that you have a secure financial future and enjoy your retirement years to the fullest.

More time to save

One of the most significant benefits of starting a pension early is the additional time you have to save money. The longer your money is invested, the more time for it to grow, which can help you accumulate a larger retirement fund. Starting early also means that you can take advantage of compound interest, which is interest earned on both the principal and the accumulated interest. Over time, compound interest can significantly increase the value of your pension fund.

Lower monthly contributions

Starting a pension early can also help you keep your monthly contributions lower. Because you have more time to save, you can spread your contributions over a longer period.

This can make it easier to budget for your retirement savings and ensure that you are putting away enough money to reach your retirement goals.

Employer contributions

If you are enrolled in a workplace pension scheme many employers offer to match employee pension contributions, (up to a certain percentage). This 'free money' can help you save even more for retirement.

Tax benefits

The government offers tax relief on pension contributions, which means you can put more money into your pension each month. For example, if you're a taxpayer, you can get up to 60% tax relief on your contributions.

Financial security

Starting a pension early can help provide financial security in retirement. By starting to save early, you can build a solid foundation for your retirement years and ensure that you have enough money to cover your expenses. This can help alleviate financial stress and allow you to enjoy your retirement years without worrying about running out of money. Knowing that you have a secure financial future can give you peace of mind and allow you to enjoy your retirement more.

Tips for starting a pension early:

- Set up a regular contribution**
 The best way to make sure you're saving for retirement is to set up a regular contribution. This could be a fixed amount each month or a percentage of your salary.
- Increase your contributions as you earn more**
 As your income increases, you can increase your pension contributions to make sure you're on track for a comfortable retirement.
- Take advantage of tax relief**
 The government offers tax relief on pension contributions, which means you can put more money into your pension each month.
- Consider employer contributions**
 Many employers offer to match employee pension contributions, which is free money that can help you save even more for retirement.

By giving yourself more time to save, keeping your contributions manageable, taking advantage of tax benefits, and providing financial security in retirement, you can set yourself up for a comfortable and fulfilling retirement. So, if you haven't started saving for retirement yet, now is the time to start!

The value of investments and any income from them can fall as well as rise and you may not get back the original amount invested.

HM Revenue and Customs practice and the law relating to taxation are complex and subject to individual circumstances and changes which cannot be foreseen.

Investing or saving?

Investing can beat inflation

Investing is a better option if you've got longer-term goals because inflation can erode the value of cash savings over the medium to short term, and your money may not have the same spending power as when you first put it away.

For example

If you have £2,000 in savings and the bank offers a 1% interest rate, each year you will get back £20. However, if the inflation rate is 6% the cash in your savings account will fall in value. After one year your cash would be worth £1,887. After five years it would be worth only £1,495!

Saving money is a great way to prepare for unexpected expenses and investing your money can have the potential for higher growth than saving.

A lot of people put their money in a savings account and leave it there to accumulate interest. While this is a good strategy in the short term, you potentially risk losing out on higher returns in the long run, while also struggling to keep up with inflation. However, investing is a good approach if you have long-term financial goals and want to earn more money than you could by saving it.

What's the difference between saving and investing?

With saving you are setting aside cash for future use, while investing means using cash to buy assets that you expect to produce a profit or income. The biggest difference between saving and investing is the level of risk. With saving you will always get back at the very least what you have put in, as well as any interest on your deposits. You won't lose any money, making it a less risky option.

Investing your money means it will rise and fall over time and there is a chance you could lose some of your initial investment. Your financial adviser will be able to help you make sure you're aware of the risks and the minimum time you should consider investing for. A longer timeframe (at least five years) will give your investment more time to recover if there are any sudden market swings.

Speak to your financial adviser to find out about a range of investment opportunities to help you meet your financial goals.

The value of investments and any income from them can fall as well as rise and you may not get back the original amount invested.

Types of investments

The main types of asset classes that investors could choose from – which your adviser can go into detail with you – are equities, bonds, and property. Different asset classes have different levels of risk and return. Usually, the safer an asset is the lower the returns will be, while the riskier an asset is, the higher the returns.

Property this could be investing in commercial property through investment funds, including retail, office, and industrial property. It makes a good long-term investment and is effective at beating inflation. Property can add diversification to your portfolio as it tends to perform differently to other assets in response to different market conditions. However, property does come with its risks, including a risk of a fall in value as well as the maintenance costs.

Bonds sometimes called fixed-term investments, bonds are issued by governments and companies looking to raise money. A bond is essentially a loan made to a company or a government by an investor for a set period – usually several years. In return they pay you a regular income in the form of interest over the life of the bond, after which they must repay your loan. Bonds typically offer stable returns and are a lower risk than equities, although they tend to offer lower returns in the long term.

Equities also known as stocks and shares, equities are issued by a public limited company and can be bought and sold on stock exchanges. When you buy an equity, you are basically buying a piece of that company and become a shareholder. Equities can make you money through increases in share price or you can receive income in the form of dividend payments. The disadvantage is that returns are not guaranteed, and the share price could fall below the level that you invested.

The value of mortgage advice from a financial adviser

Harry and Sam have been staying with Harry's dad in his two-bedroomed terrace for just over a year while they save up a deposit for their first house. The lack of space and privacy has proved challenging to say the least and would now like to start searching for their own house.

Despite having saved up a good deposit, friends have warned the couple they would have no chance of getting a mortgage due to their working situation. Sam is a self-employed, successful roofer, but has only been working for himself for two years. His friends have told him, he'll need at least three years of accounts before a lender will go anywhere near him. They say any mortgage the couple can get will be based on Harry's income alone. Harry works as a hairdresser and his salary is nowhere near enough to secure the kind of mortgage they're hoping for.

The value of mortgage advice

Harry and Sam should resign from listening to their friends as when making such an important financial commitment like this, the only guidance they need is from a qualified mortgage adviser. Here are four ways they can make a difference to a mortgage search:

1 They know the market

If, like Harry and Sam, your needs or circumstances are 'out of the ordinary', your options may indeed be more limited than those of other buyers. However, this doesn't mean you don't have options. They know the lenders who are willing to consider buyers in your situation and will check you're likely to meet their specific lending criteria before submitting a formal application. This will save you time and avoid unnecessary searches on your credit file.

2 They know what a good deal looks like

An attractive rate may seem like your best bet when choosing a mortgage but you also need to factor in things like fees, loan conditions and the mortgage term. They look beyond the headline rate and can help you understand how the length and type of loan will affect how much you pay in the long term. They'll also highlight any additional expenses like administration and booking fees, and valuation costs.

3 They do the hard work for you

As well as helping you select the right mortgage, they'll work with you to complete all of the necessary application forms and liaise on your behalf with solicitors, valuers and surveyors. They can also recommend products that provide financial protection should the unexpected happen.

4 They're professionally qualified

They're fully qualified to advise you on a wide range of lenders and products unlike high street banks and lenders. This way you'll gain from genuine choice coupled with quality advice.

YOUR HOME MAY BE REPOSSESSED IF YOU DO NOT KEEP UP REPAYMENTS ON YOUR MORTGAGE
